

# SERVICES OVERVIEW

## ABOUT US

International Technology Group, Inc. is a Los Angeles based company led by seasoned industry executives with the extensive Research and Development Facilities in Ukraine offering an extensive portfolio of innovative technologies, products and solutions.

We are focusing our model on providing a unique co-sourcing opportunity. We see our customers as partners, where our services bring mutual success.

Through a combination of qualified resources and an advanced development methodology ITG delivers high-quality solutions at a significantly lower cost.

## INDUSTRY EXPERTISE

We bring many years of experience in business requirements definitions, architectural design, development, quality assurance, deployment and maintenance of multiple enterprise applications.

Our team offers significant expertise in high complexity integrations and interoperability solutions focusing the workflow management, change management and application lifecycle management.

We have a proven record of helping our partners to extend the business value of legacy and packaged solutions to meet highly demanding and continuously changing business needs.

Our Solutions Architects work closely with our partners helping them to adopt our know-how to the specific requirements of their organizations.

## CO-SOURCING

We provide Technical and Business expertise on all stages of the software development lifecycle, from concept to maintenance. On any project, at any stage we offer architectural guidance and project management.

Whether co-sourcing is part of the strategy for cost reduction, improving operations or restructuring, the services we offer will provide financial return, risk mitigation and strategic alignment.

We specialize in the following areas:

### Solution Customizations

- Applications customizations and third party integrations.
- User Interface Adaptation.
- Custom Report Development.

### Solution Development

- Increased resource capacity.
- Experience with new technologies.
- Product migration experience.
- Process, quality and cost saving.

### Solution Maintenance

- Free up your resources to focus on innovative products.
- Improve Time to Market on applications upgrades.

## **FLEXIBLE ENGAGEMENT MODELS**

Our engagement models offer a unique hybrid team consisting of U.S. based Solutions Architect, Project Manager, and R&D Team located in Europe.

We propose several flexible engagement models designed to satisfy technical requirements and business needs of our partners.

### **Fixed Fee Project**

This type of engagement is recommended for independent and well defined projects.

Key Benefits:

- Low Risk
- Quick start

### **Time and Material**

This engagement model is particularly useful in contexts where the projects are complex and are prone to specification and design changes midstream.

Key Benefits:

- High flexibility of the project scope
- Manage Deadline

### **Virtual Team Extension**

Through this model, engineers are kept on the project for a prolonged period of time, making it an ideal choice for highly technical and complex projects.

Key Benefits:

- Knowledge retention and dedicated resource pool
- Flexibility of the project scope
- Scalability for future growth
- Superior performance and established operational relationship
- Customer specific training, quality and process management

For an additional scalability, our partners are able to seamlessly transition from one engagement model to another.

## **DEVELOPMENT CENTERS**

Our development centers are modern facilities equipped to the latest Information Technology Standards.

Management of our development centers report directly to U.S. Executive team, promoting efficient communication and streamlining decision making process.

Locations of our development centers enable us to communicate with our partners in real time in U.S. and Europe.

## **ECLIPSE**

We are one-stop solution provider for the Eclipse development needs. As Eclipse Add-In Provider, we offer a dedicated Eclipse development competency center at the fraction of your current R&D cost.

Our highly trained professionals produce high-quality code adhering to Eclipse Standards, conventions and guidelines. We specialize in:

- Eclipse 3.x plug-in and stand-alone application development
- Complex class hierarchy design using Eclipse Modeling Framework (EMF)
- User Interface design using Standard Widgets Toolkit (SWT)
- Design and development of asynchronous communication protocols in distributed applications using Eclipse Communication Framework (ECF)
